**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/820,865

**Applicant(s)**

WATANABE ET AL.

**Examiner**

BACKHEAN TIV

**Art Unit**

2451

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on RCE 11/24/08.  
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1, 4 and 6-20 is/are pending in the application.  
4a) Of the above claim(s) 2, 3, 5 is/are withdrawn from consideration.  
5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
6) ☒ Claim(s) 1, 4, 6-20 is/are rejected.  
7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.  
10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some \* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)  
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)  
3) ☐ Information Disclosure Statement(s) (PTO-8508)  
Paper No(s)/Mail Date \_\_\_\_\_  
4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_  
5) ☐ Notice of Informal Patent Application  
6) ☐ Other: \_\_\_\_\_

***Detailed Action***

Claims 1,4,6-20 are pending in this application. Claims 2,3,5 have been cancelled.

This is a response to the Amendments/Remarks/RCE filed on 11/24/08.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,4,6-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 7,081,969 issued to Motamed et al.(Motamed) in view of US Publication 2003/0095524 issued to Stephens et al.(Stephens) in further view of US Patent 7,408,671 issued to Wanda in further view of US Patent 7,304,758 issued to Ferlitsch.

As per claim 1, Motamed teaches an information management apparatus for managing service-related information in a system having a plurality of electronic apparatuses linked therein via network, the electronic apparatuses being for working in liaison with each other to implement a desired service(Abstract), the information management apparatus comprising:

a service-specific information acquisition section for acquiring service-specific information which (i) is related to a combination of types of electronic apparatuses required for implementing a service and (ii) contains information related to an

application that is operable on each of the electronic apparatuses that implements which implement the service and is used for implementing the service(col.1, lines 40-55; printing software and print job as "service-specific information");

a storage section for storing at least one piece of service-specific information acquired by the service-specific information acquisition section, the stored piece of service-specific information corresponding to the service(col.2, lines 45-col.3, lines 43);

an apparatus-specific information acquisition section for acquiring apparatus-specific information related to each electronic apparatus of the system(col.2, lines 45-col.3, lines 43; functions of each printer as "apparatus-specific information");

a request reception section for receiving search requests from the electronic apparatuses(col.2, lines 45-col.3, lines 43);

a search section for searching for the service which can be implemented by the electronic apparatuses of the system, the searching being (i) conducted in response to a search request received by the request reception section, and (ii) based on the service-specific information stored in the storage section and based on the apparatus-specific information acquired by the apparatus-specific information acquisition section(col.2, lines 45-col.3, lines 43);

Motamed however does not teach a transmission section for transmitting, to the electronic apparatuses of the system, a search result which identifies a listing of services which can be implemented by the electronic apparatuses of the system; an update information acquiring section for, based on the stored piece of service-specific information, accessing a portal site to acquire update information regarding the service

that corresponds to the stored piece of service-specific information; and an update notification section for, when the acquired update information is related to an application, notifying every electronic apparatus, that corresponds to the application related to the update information, of the application wherein, when the acquired update information is not related to an application, the storage section updates the service-specific information stored thereon.

Stephens teaches a transmission section for transmitting, to the electronic apparatuses of the system, a search result which identifies a listing of services which can be implemented by the electronic apparatuses of the system,(para.0071,0073,0075).

Therefore it would have been obvious to one ordinary skill in the art at the time of the invention to modify the teachings of Motamed to include a transmission section for transmitting, to the electronic apparatuses of the system, a search result which identifies a listing of services which can be implemented by the electronic apparatuses of the system as taught by Stephens in order to inform devices of available services(Stephens, para.0073).

One ordinary skill in the art would have been motivated to combine the teachings of Motamed and Stephens in order to inform devices of available services(Stephens, para.0073).

Motamed in view of Stephen does not explicitly teach an update information acquiring section for, based on the stored piece of service-specific information, accessing a portal site to acquire update information regarding the service that

corresponds to the stored piece of service-specific information; and an update notification section for, when the acquired update information is related to an application, notifying every electronic apparatus, that corresponds to the application related to the update information, of the application wherein, when the acquired update information is not related to an application, the storage section updates the service-specific information stored thereon.

Wanda teaches an update information acquiring section for, based on the stored piece of service-specific information, accessing a portal site to acquire update information regarding the service that corresponds to the stored piece of service-specific information; when the acquired update information is not related to an application, the storage section updates the service-specific information stored thereon(Fig.8,14)

Therefore it would have been obvious to one ordinary skill in the art at the time of the invention to modify the teachings of Motamed in view of Stephen to include updating a print job status as taught by Wanda in order to be informed of the status of each print job.

One ordinary skill in the art would have been motivated to combine the teachings of Motamed, Stephen, and Wanda in order to be informed of the status of each print job.

Motamed in view of Stephen in further view of Wanda does not explicitly teach an update notification section for, when the acquired update information is related to an application, notifying every electronic apparatus, that corresponds to the application related to the update information.

Ferlitsch explicitly teaches updating print driver for a single device, however it does make suggestions of multiple printer devices(col.6, lines 1-8).

Therefore it would have been obvious to one ordinary skill in the art at the time of the invention to modify the teachings of Motamed in view of Stephen in further view of Wanda to include updating multiple printing device driver as suggested by Ferlitsch in order to have the most updated version of a software.

One ordinary skill in the art would have been motivated to combine the teachings of Motamed, Stephen, Wanda and Ferlitsch in order to have the most updated version of a software.

As per claim 4, the information management apparatus according to claim 1, further comprising an application acquisition section for acquiring, an updated version of the application when the acquired update information if the information related to the application indicates that an updated version of the application is available, wherein, when the electronic apparatuses are notified of the updated version of the application, the transmission section is adapted to transmit the updated version of the application to the electronic apparatuses if the electronic apparatuses provide the transmission section with a notice to download the updated version of the application(Ferlitsch, col.6, lines 1-8, col.6, lines 1-col.7, lines 60). Motivation to combine set forth in claim 1.

As per claim 6, the information management apparatus according to claim 1, wherein: the apparatus-specific information acquisition section is adapted to acquire apparatus- specific information associated with the electronic apparatuses from the electronic apparatuses; and the service-specific information acquisition section is

adapted to acquire the service specific information from a server which is for managing the service specific information and which is present on the network(Motamed, col.2, lines 45-col.3, lines 43, Stephens, Fig.1, para.0032). Motivation to combine set forth in claim 1.

As per claim 7, the information management apparatus according to claim 6, further comprising: an inquiry section for inquiring of the server whether the service-specific information stored in the storage section has been updated; and a notification section for notifying the electronic apparatuses that the service-specific information has been updated if a result of the inquiry by the inquiry section indicates that the service-specific information has been updated. (Stephens, para.0070,0080,0090, Ferlitsch, col.6, lines 1-8, col.6, lines 1-col.7, lines 60). Motivation to combine set forth in claim 1.

As per claim 8, the information management apparatus according to claim 7, wherein the inquiry section is adapted to make an inquiry to the server at regular intervals(Ferlitsch, col.6, lines 1-8, col.6, lines 1-col.7, lines 60). Motivation to combine set forth in claim 1.

As per claim 9, the information management apparatus according to claim 7, further comprising an update section for updating the service-specific information stored in the storage section if a result of the inquiry by the inquiry section indicates that the service- specific information has been updated(Wanda, Fig.8,14). Motivation to combine set forth in claim 1.

As per claim 10, the information management apparatus according to claim 1, wherein: the apparatus-specific information acquisition section is adapted to acquire apparatus- specific information associated with the electronic apparatuses from the electronic apparatuses; and the service-specific information acquisition section is adapted to acquire the service- specific information from the electronic apparatuses(Motamed, col.2, lines 45-col.3, lines 42, Stephens, para.0058,0069).  
Motivation to combine set forth in claim 1.

As per claim 11, the information management apparatus according to claim 1, wherein: the service-specific information related to the combination of the types of the electronic apparatuses is related to a combination of models of the electronic apparatuses; the information management apparatus further comprises a specification section which is adapted to (i) refer to the service-specific information stored in the storage section and related to the service to be implemented by the electronic apparatuses, and (ii) specify a model of one electronic apparatus which works in liaison with another electronic apparatus to implement the service; and the transmission section is adapted to transmit information which identifies the electronic apparatuses specified by the specification section to the electronic apparatuses which are used to implement the service(Motamed, col.2, lines 45-col.3, lines 42, Stephens, Fig.7).  
Motivation to combine set forth in claim 1.

As per claim 12, the information management apparatus according to claim 1, further comprising: a cease confirmation section for confirming the presence or absence of a ceased service corresponding to the service-specific information stored in the

storage section; and a request section for requesting the electronic apparatuses storing an application which corresponds to the ceased service to delete the stored application if the cease confirmation section determines that a ceased service exists among services corresponding to the service-specific information stored in the storage section(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090). Motivation to combine set forth in claim 1.

As per claim 13, the information management apparatus according to claim 1, further comprising: a cease confirmation section for confirming the presence or absence of a ceased service corresponding to the service-specific information stored in the storage section; and a deletion section for deleting the service-specific information, which corresponds to a ceased service, from the storage section if the cease confirmation section determines that a ceased service exists among services corresponding to the service-specific information stored in the storage section(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090). Motivation to combine set forth in claim 1.

As per claim 14, the information management apparatus according to claim 1, further comprising: an apparatus-specific information storage section for storing the apparatus-specific information acquired by the apparatus-specific information acquisition section; and an information deletion section for deleting the apparatus-specific information stored in the apparatus-specific information storage section in response to a request from the electronic apparatuses(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090). Motivation to combine set forth in claim 1.

As per claim 15, the information management apparatus according to claim 14, wherein, in response to the request from the electronic apparatuses, the information deletion section is adapted to delete the apparatus-specific information while deleting service-specific information related to services for which the electronic apparatuses, which correspond to the deleted apparatus-specific information, are used from among service-specific information related to services which can be implemented by the electronic apparatuses (Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090). Motivation to combine set forth in claim 1.

As per claim 16, the information management apparatus according to claim 1, wherein: when an additional electronic apparatus is newly added to the system, the apparatus- specific information acquisition section is adapted to acquire, from the additional electronic apparatus, information related to a user of the additional electronic apparatus together with the apparatus-specific information; and the information management apparatus further comprises: a user information management section for managing user-related information; a user authentication section for determining whether to register the apparatus- specific information acquired by the apparatus-specific information acquisition section using (i) the user-related information managed by the user information management section and (ii) the user-related information acquired by the apparatus-specific information acquisition section; and an apparatus-specific information storage section for storing the apparatus- specific information acquired by the apparatus-specific acquisition section if the user authentication section determines to register the apparatus-specific

information(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090).

Motivation to combine set forth in claim 1.

As per claim 17, the information management apparatus according to claim 1, further comprising: an apparatus-specific information storage section for storing apparatus-specific information transmitted from and associated with the electronic apparatuses; and an apparatus determination section for determining whether the apparatus-specific information corresponding to the electronic apparatuses associated with the service-specific information obtained by the search section is stored in the apparatus-specific information storage section(Motamed, col.2, lines5-col.3, line 42).

As per claim 18, the information management apparatus according to claim 17, further comprising an absent electronic apparatus notification section for notifying the electronic apparatuses, which have provided a search request, of the type of the electronic apparatus corresponding to the apparatus-specific information which is not stored in the apparatus-specific information storage section if the apparatus determination section determines that the apparatus-specific information corresponding to a type of an electronic apparatus associated with the service-specific information obtained by the search section is not stored in the apparatus-specific information storage section(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090).  
Motivation to combine set forth in claim 1.

As per claim 19, the information management apparatus according to claim 17, wherein, if the apparatus determination section determines that the apparatus-specific information corresponding to a type of the electronic apparatus associated with the

service- specific information obtained by the search section is not stored in the apparatus-specific information storage section, then the storage section does not store the service-specific information obtained by the search section(Motamed, col.2, , line 5-col.3, line 42, Stephens, para.0082,0090). Motivation to combine set forth in claim 1.

As per claim 20, do not teach or further define over the limitations in claims 1,4,6-19. Therefore claims 20 is rejected for the same reasons set forth above.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1,4,6-20 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

**Examiner's Note:** Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Backhean Tiv whose telephone number is (571) 272-5654. The examiner can normally be reached on M-F 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on (571) 272-3964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
